CORNING

Corning® Storage Bottles

Corning offers PYREX storage bottles in a wide variety of sizes, shapes and styles to meet all of your storage needs.

Corning offers a wide variety of glass and plastic screw cap bottles designed to meet all of your storage needs. This guide will help you select the best bottle to meet these needs. The following table shows the major differences between Corning's glass and plastic storage bottles.

Comparison of Corning Glass and Plastic Storage Bottles

PYREX® and PYREXPLUS® Glass Bottles	Corning® and Costar® Plastic Bottles
Reusable: easy to clean and sterilize; very durable for long life	Disposable: Sterile and ready to use; very convenient, no washing or clean up required
Excellent chemical resistance: good for acids, alkalis and solvents but also media and aqueous solutions	Lower chemical resistance: good for media and aqueous solutions
Excellent temperature resistance: bottles can be repeatedly sterilized	Lower temperature resistance: only polycarbonate bottles can be autoclaved
Nine sizes: 25 mL to 10L	Five sizes: 125 mL to 1L

Composition of Code 7740 Glass

Chemicals	% (approx.)
SiO ₂	81%
B ₂ O ₃	13%
Na ₂ O	3%
Al ₂ O ₃	2%
K ₂ O	1%

Corning uses Code 7740 Type I, Class A borosilicate glass for all of its glass storage bottles. This glass conforms to federal specification DD-G-54 lb and ASTM E-438 (except for K₂O content). This glass also meets the U.S. Pharmacopoeia specs for Type I Borosilicate Glass.

Glass Screw Cap Storage Bottles

PYREX reusable storage bottles are designed for heavy duty storage of reagents, sterile tissue culture media and sera, biological fluids and other aqueous and nonaqueous solutions. All PYREX borosilicate glass bottles offer:

- ▶ Code 7740 Type 1, Class A borosilicate glass for superior chemical and thermal resistance, able to withstand repeated sterilization cycles or freezing down to -70°C.
- ▶ Linerless, one-piece autoclavable polypropylene plug seal caps and drip-free pouring rings
- ▶ Permanent enamel marking spot and graduations
- ▶ A wide range of optional caps for venting and aseptic liquid collection or transfer – see Caps and Accessories on page 5.
- ▶ Choice of traditional round storage bottles or space saving square storage bottles

Comparison of PYREX and PYREXPLUS Glass Storage Bottles

	PYREX Round Clear Glass and Low Actinic Storage Bottles	PYREXPLUS Round Glass Storage Bottles	PYREX Square Glass Storage Bottles	PYREX Wide Mouth Glass Storage Bottles
Bottle Material	Code 7740 borosilicate glass	Code 7740 borosilicate glass with PVC coating	Code 7740 borosilicate glass	Code 7740 borosilicate glass
Cap Color	Orange	Green	Orange	Orange
Cap Material (Maximum Temp.)	Polypropylene (140°)	Polypropylene (140°)	Polypropylene (140°)	Polypropylene (140°)
Autoclavable (121°C, 15 psi)	Yes	Yes	Yes	Yes
Maximum Recommended Working Temp. (°C), Bottle only	230 [†]	80°	230 [†]	230 [†]
Minimum Recommended Working Temp. (°C)*	-70 [*]	10 [*]	-70 [*]	-70 [*]
Use with Corning Vacuum Filters	Recommended	Recommended	Not Recommended	NA
Available sizes:	25 mL, 50 mL, 100 mL, 250 mL, 500 mL, 1L, 2L, 5L & 10L	100 mL, 250 mL, 500 mL, 1L, 2L, 5L & 10L	100 mL, 250 mL, 500 mL & 1L,	500 mL, 1L & 2L

* Bottle performance in freezers depends on both the temperature and contents in the bottle. It is strongly recommended that a trial run be performed under actual conditions to test the suitability of the bottles for frozen storage.

† Extreme service at 490°C.

Corning's round borosilicate glass storage bottles are available clear for general storage (left), with low actinic red stain for light sensitive reagents (middle), or with a tough PVC coating (PYREXPLUS®, right) for extra layer of safety against breakage and spills.

PYREX® Round Glass Storage Bottles

- Available with either clear glass for routine storage applications or low actinic red glass for storing light sensitive materials
- Nine sizes to choose from: 25 mL, 50 mL, 100 mL, 250 mL, 500 mL, 1L, 2L, 5L and 10L
- 100 mL through 2L sizes can be used with Corning Bottle Top Vacuum Filters. **Caution:** Bottles larger than 2L should NOT be used with bottle top filter units, or in other applications involving vacuum pressure, as breakage may occur.

PYREXPLUS Round Glass Storage Bottles

- Bottles have a protective PVC coating to help prevent glass from shattering and to reduce spills.
- Seven sizes to choose from: 100 mL, 250 mL, 500 mL, 1L, 2L, 5L and 10L.
- Autoclavable at 121°C and resistant to thermal shock. **Caution:** Do not place these bottles over direct heat or flame or heat above 121°C moist heat or 110°C dry heat.
- Come with autoclavable GL45 green polypropylene plug seal caps with drip-free pouring rings
- Teal enameled graduations and marking spot.
- Ideal for use with Corning Bottle Top Vacuum Filters or other mild vacuum applications

PYREX Square Glass Storage Bottles

- Easier to handle and require less space (13 to 20%) on the shelf or in the autoclave
- Four sizes to choose from: 100 mL, 250 mL, 500 mL and 1L.
- **Caution:** Square bottles should NOT be used with bottle top filter units, or in other applications involving vacuum pressure, as breakage may occur.

Square PYREX storage bottles save on space in refrigerators and autoclaves.

Corning® Storage Bottles

PYREX® wide mouth storage bottles have extra wide neck opening for use with funnels and for easier access and pouring.

PYREX Wide Mouth Glass Storage Bottles

- ▶ Three sizes to choose from: 500 mL, 1L and 2L
- ▶ Neck opening is 5 times larger than on GL45 threaded bottles – much easier to add or remove powders and easier to clean.

Plastic Screw Cap Storage Bottles

Corning's disposable polystyrene and polycarbonate storage bottles are designed for researchers who want to store sterile tissue culture media and sera, buffers, biological fluids and other aqueous solutions in convenient, disposable bottles. All plastic storage bottles offer:

- ▶ Convenience – sterile, ready to use with no clean up after
- ▶ 45 mm diameter caps provide an air tight seal and help minimize contamination and leaks
- ▶ Choice of three styles:
 - Corning square polycarbonate bottles are break resistant and autoclavable or microwavable
 - Corning easy grip round polystyrene bottles have a low profile for easier gripping and greater stability
 - Costar® traditional round bottles

Corning offers round polystyrene storage bottles in two designs (above left and middle) as well as new square polycarbonate storage bottles (above right).

Comparison of Polystyrene and Polycarbonate Storage Bottles

	Costar® Round Polystyrene Storage Bottles	Corning® Easy Grip Round Polystyrene Storage Bottles	Corning Square Polycarbonate Storage Bottles
Bottle Material	Polystyrene	Polystyrene	Polycarbonate
Cap Color	Red	Orange	Orange
Cap Material (Maximum Temperature, C)	High Density Polyethylene (121°)	High Density Polyethylene (121°)	Polypropylene (140°)
Autoclavable† (121°C, 15 psi, 20 minutes)	No	No	Yes, once†
Maximum Recommended Working Temperature (C)	70°	70°	130°
Minimum Recommended Working Temperature (C)*	-20°*	-20°*	-80°*
Use with Corning Vacuum Filters	Recommended	Recommended	Not Recommended
Available sizes:	125 mL, 250 mL, 500 mL and 1L	150 mL, 250 mL, 500 mL and 1L	150 mL, 250 mL, 500 mL and 1L

† Autoclaving will reduce mechanical strength.

* Bottle performance in freezers depends on both the temperature and contents in the bottle. It is strongly recommended that a trial run be performed under actual conditions to test the suitability of the bottles for frozen storage.

Caps and Accessories

Corning offers a variety of cap colors and styles for PYREX storage bottles.

Septum caps provide syringe access to solutions without sample contamination.

Bottles with these autoclavable dispensing caps are ideal for aseptic liquid transfer and collection.

All PYREX® storage bottles come with polypropylene caps that are fully autoclavable at temperatures up to 140°C. These one piece caps seal using an integral plug that is designed to mold against the inside rims of glass bottles. While these one piece caps also fit the plastic storage bottles, they will not provide a gas tight seal.

Optional plug seal gray caps have a single vent in their centers consisting of a 0.22 µm PTFE membrane that is heat sealed on the inside to the cap. This membrane permits automatic gas exchange, allowing pressure equalization during autoclaving to insure sterility of solutions in the bottle. The hydrophobic PTFE membrane material will prevent liquids from wetting through.

Optional red caps with polybutylterephthalate (PBT) coated rubber liners are available for applications requiring temperatures as high as 180°C. These two piece caps use a traditional gasket design to seal against the rim. The optional red PBT high temperature pouring rings should always be used in conjunction with these caps for applications above 140° C.

Corning® Storage Bottles

Corning offers reusable PBT septum caps for storage bottles (not available for wide mouth bottles) with a choice of silicone septa or PTFE faced silicone septa. The replaceable septa are ordered separately.

Dispensing caps (Corning Cat. No. 401654) with two 15.4 cm stainless steel tube ports can easily convert storage bottles with GL45 threads for use in automated cell culture or assay systems requiring aseptic liquid dispensing or collection. These reusable caps can be used on all Corning glass and plastic bottles with 45 mm diameter necks.

Care and Use

Cleaning PYREX® Storage Bottles

Wash bottles as quickly as possible after use. Bottles contaminated with blood clots, culture media, etc., should be sterilized before cleaning. If a thorough cleaning is not immediately possible, then soak bottles in water. If bottles are not cleaned immediately, it may become difficult or impossible to remove the material later. Place the glassware in a large container filled with water for soaking. The bottles should then be rinsed in tap water, scrubbed with detergent and rinsed again.

Most new glassware is slightly alkaline in reaction. For critical cell culture work, new bottles should be soaked several hours in acid water (a 1% solution of hydrochloric or nitric acid) before washing.

Rinsing

After cleaning, rinse glass bottles with running tap water. Allow the water to run into and over them for a short time, then partly fill each piece with water, thoroughly shake and empty at least six times. The final rinse should be done using deionized, distilled or other source of good quality water.

PYREXPLUS® Labware Use and Care

- ▶ Do not place PYREXPLUS labware over direct heat or open flame.
- ▶ The recommended temperature use range for PYREXPLUS labware is 10° C to 80° C. Do not continuously expose PYREXPLUS labware to heat above 80° C.
- ▶ Do not expose to dry heat in a dishwasher above 110°C (230°F). Drying time should not exceed 15 minutes at 110°C (230°F).
- ▶ Do not steam autoclave above 121°C (250°F). Sterilizing time should not exceed 15 minutes.
- ▶ Do not refrigerate below -20°C (-4°F).
- ▶ Do not remove the protective coating. Do not use a vessel on which the coating is hardened, darkened or otherwise damaged.
- ▶ Do not allow prolonged or repeated exposure of the coating to strong acids or solvents.
- ▶ Do not use a vessel once the glass is broken. Immediately transfer the contents of a broken vessel to an approved container and properly dispose of the broken vessel.
- ▶ Do not incinerate discarded vessels. Place in proper disposal containers.
- ▶ Proper care and handling of PYREX and PYREXPLUS labware will greatly increase its life and increase the safety of your workplace.

Visit www.corning.com/lifesciences/technical_info for additional information on the use and care of your PYREX and PYREXPLUS glassware.

Glassware Safety Precautions

These products are intended for use by persons knowledgeable in safe laboratory practices. Failure can result from surface damage, improper pressure or temperature, or use with incompatible chemicals.

WARNING: To avoid breakage and possible injury, Corning recommends the following:

- ▶ Do not heat glassware that is scratched, etched, cracked or nicked, it will be prone to breakage.
- ▶ Do not use any implement inside a glass vessel that can scratch or chip the glass.
- ▶ Do not use PYREX® or PYREXPLUS® bottles over direct heat such as a flame or on a hot plate.
- ▶ Do not put hot bottles onto cold or wet surfaces, or cold bottles onto hot surfaces. The bottles may break due to the thermal shock caused by the temperature change.
- ▶ Extra care to prevent thermal shock must be used when removing bottles from ultra low temperature freezers (-70° to -135°C). Immediately rinse the entire bottle under cold running water until thawing begins. Do not place bottles directly from the freezer into warm water baths.
- ▶ Because of variations in conditions, Corning cannot guarantee glassware against breakage and personal injury in vacuum or pressure applications.
- ▶ Do not use reagent bottles larger than 1L or laboratory bottles larger than 2L with bottle top filter units, or in vacuum applications. Do not use any bottle in pressure applications.
- ▶ Adequate safety precautions should always be taken when handling or using glassware to protect against breakage and personal injury.
- ▶ Bottles should NOT have caps tightened immediately after autoclaving because the vacuum resulting from cooling can cause breakage. This statement does not apply to the vented cap (1395-45LTMC).
- ▶ The vented cap (Cat. No. 1395-45LTMC) is NOT recommended for use on the 5L and 10L bottles.
- ▶ 1396 and 1397 SERIES BOTTLES ARE NOT RECOMMENDED FOR VACUUM USE.

This physical properties chart is intended to be used as a general guide only. The mechanical strength, color, appearance and dimensional stability of plastic labware are affected to varying degrees by the chemicals they contact. Specific operating conditions, especially temperature, will also affect the chemical resistance.

PYREXPLUS media bottles (Cat. No. 61626 series) have a protective plastic coating for extra protection in vacuum applications and can be autoclaved.

PYREX Media Bottles and Vacuum Safety

Round PYREX media storage bottles (Cat. No. 1395 series), 2L and smaller, are ideal for room temperature vacuum filtration with Corning® Bottle Top Filters or aspiration applications. For additional protection during vacuum application PYREXPLUS media bottles with a protective PVC coating (Cat. No. 61626 series) are highly recommended. Square PYREX media storage bottles (Cat. No. 1396 series) should not be used with bottle top filter units, or in other applications involving vacuum, as breakage may occur because of their shape.

Because of variations in conditions or damage from usage, such as scratches or uneven heating, Corning cannot guarantee any glassware against breakage under vacuum or pressure. All glass containers used in vacuum work must be securely and adequately taped or shielded to restrain flying glass in the event of an implosion. Adequate precautions should be taken to protect personnel doing such work including using gloves and safety glasses, goggles, or a face shield. For additional safety information visit http://www.corning.com/lifesciences/technical_info.

Corning® Storage Bottles

Physical properties of Corning® Glass and Plastic Bottles

	CHEMICAL RESISTANCE			Sterilization	Thermal Durability
	Recommended	Not Recommended			
PYREX® Glass Bottles	Almost all chemicals	Hydrofluoric acid, hot phosphoric acid, and strong, hot alkali		Autoclave or dry heat	490°C*
PYREXPLUS® Glass Bottles, PVC coated	Weak acids, strong alkali, oils, alcohols	Hydrofluoric acid, hot phosphoric acid, strong, hot alkali, aldehydes, ketones, strong acids, and chlorinated solvents		Autoclave†	110°C
Polycarbonate Plastic Bottles	Weak acids, weak alkali, alcohols	Strong acids, strong alkali, ketones, aliphatic, aromatic and chlorinated hydrocarbons		Autoclave once	135°C
Polystyrene Plastic Bottles	Weak acids, strong alkali, alcohols	Strong acids, ketones, aliphatic, aromatic and chlorinated hydrocarbons		Do not autoclave	80°C
Polypropylene Caps & Rings	Acids, alkali, solvents, oils alcohols	Aromatic and chlorinated hydrocarbons, oxidizing acids		Autoclave	140°C
Polyethylene Caps	Acids, alkali, aldehydes, solvents, alcohol, oils	Aliphatic, aromatic, and chlorinated hydrocarbons, oxidizing acids		Do not autoclave	121°C
PBT Caps and ETFE Rings	Weak acids, weak alkali, alcohols, esters, ether, benzene, mineral oil	Strong acids, strong alkali, and ketones		Autoclave or dry heat	180°C

†Sterilization time should not exceed 15 minutes at 121°C (250°F). Drying time should not exceed 15 minutes at 110°C (230°F).

*Thermal up shock or down shock may cause breakage.

Beginning-to-end Solutions for Microbiology

For premium quality and performance in quality testing labs, you can count on Corning. In our continuous efforts to improve efficiencies and develop new tools for microbiology applications, we have scientists working in Corning labs doing what you do every day, across the globe. From sampling and preparation to bacteria growth and analysis, our technical experts understand your challenges and the changing regulatory requirements that shape your day-to-day processes.

It is this expertise, plus a 160 year legacy of Corning innovation and manufacturing excellence, that puts us in a unique position to be able to offer high-quality, reliable microbiology consumables for quality testing labs. The recent introduction of our Gosselin™ brand line of consumables including Petri dishes, dippers and inoculating loops, has completed our portfolio, creating a beginning-to-end solution for quality testing labs across industry segments.
