The AcroSeal system: performance, convenience, safety

How to use AcroSeal packaging

Acros Organics™ AcroSeal™ packaging is easy to use.

To get the best results, we recommend the following steps:

1. Puncture the septum
2. Withdraw the required amount
3. Replace the nitrogen blanket
4. Store upright to prevent prolonged product contact with the seal

Advanced tips:

1. Prepare the nitrogen balloon in advance and use two balloons, one inside the other
2. Purge the doubled balloons with nitrogen three times before use
3. Bend the needle to make it easier to use and control
4. Flush each needle and syringe with nitrogen three times before use
5. Use the reaction flask to flush the syringe and needle prior to use

To get the best results from the septum, use 18- to 21-gauge needles and puncture in a clockwise pattern to avoid piercing the septum in the same place.

If you require a large amount of solvent, remove the whole cap under an inert atmosphere and decant the desired amount of product from the bottle.

AcroSeal extra dry solvents

Choose from a wide range of extra dry solvents for moisture-sensitive and biochemistry applications. Deuterated solvents are also available in AcroSeal packaging, offering a low-cost alternative to ampule packaging and reducing the hazards associated with handling ampules.

Available in three different grades:

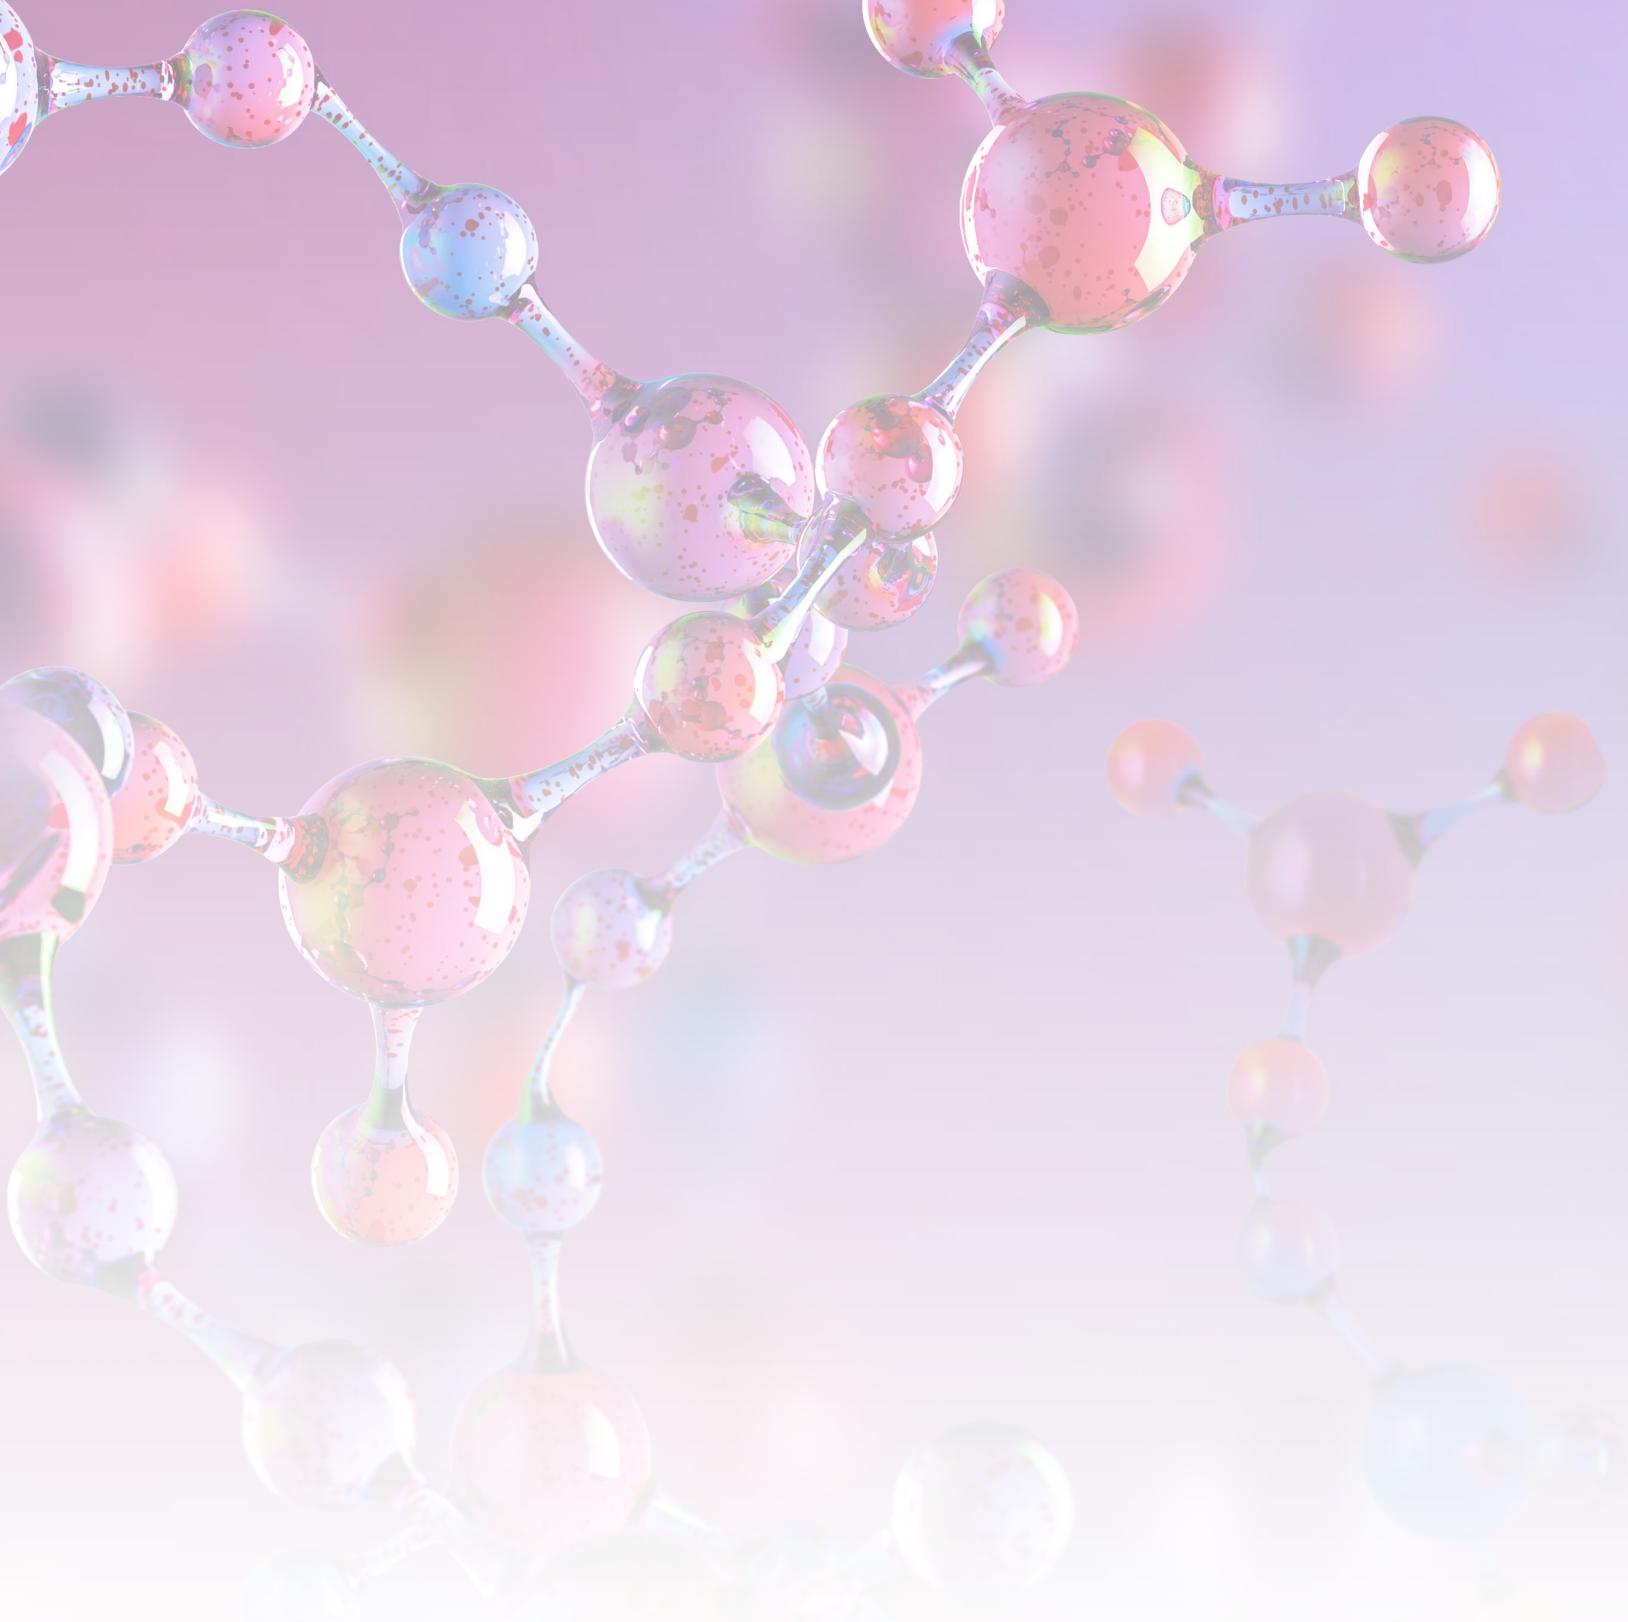

- Standard grade: Suitable for most applications
- Molecular sieves grade: Stored over molecular sieves for prolonged shelf life
- Supreme grade: Filtered through 0.2 micron filters for dust-free applications

Below is the complete range of Acros Organics™ and Alfa Aesar™ extra-dry solvents in AcroSeal packaging.
