Antiviral compounds

Antiviral compounds (AVCs) are a category of antimicrobial drugs used for treating viral infections by inhibiting the development of the viral pathogen inside the host cell.

Within our Thermo Scientific chemical portfolio we offer a broad range of high-quality compounds with known anti-viral properties in a wide range of convenient pack-sizes to facilitate your research. These products are available off-the-shelf and can be shipped very quickly to your research labs.

As an example of their application during the current Coronavirus pandemic scientists have already identified > 70 known antiviral drugs to test against the Coronavirus.

[A New York Time article from March 23, 2020, said scientists have already identified > 70 known antiviral drugs to test against the Coronavirus.](#)

Some drugs are already used to treat other diseases, and repurposing them to treat Covid-19, the illness caused by the coronavirus, may be faster than trying to invent a new antiviral from scratch, scientists have explained.

Fisher Scientific Cat. No.	Description	CAS #	Size
AC458860010	Abacavir sulfate, 99%	188062-50-2	1 g
