Research into novel antivirals is very complex. Most compounds with antiviral activity share interesting structural features, with heterocycle scaffolds, complex multifunctional nature and often several chiral centres.

Remdesivir has emerged as a particularly promising therapeutic agent to fight severe acute respiratory syndrome-related coronavirus (SARS-CoV-2) infections.

Patent WO 2017184668, Clarke MO, Jordan R, Mackman RL, Ray AS, Siegel D, "Preparation of amino acid-containing nucleosides for treating flaviviridae virus infections", published 26 October 2017, assigned to Gilead Sciences Inc
